R1000V: The Russell 1000 Value index is a market capitalization-weighted, total return index of larger capitalization companies which exhibit traditional value characteristics. **S&P500:** The S&P 500 index is a market capitalization-weighted, total return index of widely held common stocks.

FBP STOCK APPROACH CHART
VALUE INVESTMENT PROCESS

OUR BUY AND HOLD DECISIONS ARE WHAT MAKE US DIFFERENT

Everyone wants to buy stocks low and sell them high. However, an important distinction among managers' buying styles is the timing of the purchase. Our Stock Approach Chart is a longstanding visual description of the Flippin, Bruce & Porter investment process and it also captures the cyclical nature of security prices. We use this chart often in discussing our long-term approach to investing and have found it to be beneficial in explaining the objective of our investment efforts.

The time from peak to peak is approximately 10 years. FBP's research effort begins early in the cycle, as a company falls out of favor and its stock price declines toward an eventual bottom. As part of our security selection process, we

establish three price targets for each company followed. These *downside*, *fair* and *full value* targets are determined, monitored and adjusted on an ongoing basis.

Our goal is to begin purchasing at point A, which is at a significant discount to our *full value*, thus providing a *margin of safety*. As company valuation measures, fundamentals and investor sentiment improve, the security price will increase. As this scenario continues to develop, the stock will move through our fair value range and eventually toward our full value target. Our exit strategy is implemented at point B. The average holding period for stocks in our portfolio is five years.

There is no assurance that the stated goals of the portfolio can be obtained. Investments in securities involve risks, including the risk of losing principal. Past performance is no guarantee of future results.
